

MEET YOUR TERABOT 4[®]

Affordable | Quality | Industrial | Large-Scale | Hand-Crafted

PRICE \$40,000

BUILD VOLUME 915 X 915 X 1,000 MM

3D Print at the Human Scale

Industrial 3D printing is now affordable. The massive print volume starts at 30X larger than desktop 3D printers, at a fraction of the cost of comparable industrial systems.

For High-Strength Materials

Print with thermoplastics that melt below 320°C, Terabot's all-metal hot end opens the door to a wider variety of 3D printing materials, including high-strength & heat-resistant plastic filaments.

Modular, Lifetime Construction

Free from the constraints of product versioning, the Terabot platform enables user upgrades & customization. No machine will fall behind with new features available as add-on packages.

Full Service Solutions

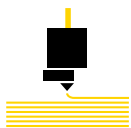

Design & Research Focused on Your Needs

re:3D is ready to assist you with your industrial large-scale 3D printing needs. Our team is experienced in fabricating built-to-spec modified hardware for specialized print requests and available to support material selection, design, contract printing, education and consulting needs.

All Terabots are covered under our factory warranty for six months, including damage due to normal wear and tear, user error or faulty parts. Extended warranty options and maintenance plans are available up to three years.

Printing Specs

Mechanical

								
Compatible with Hardened Steel & 20 Series Hot Ends	Supports Thermoplastics Melting Below 320°C	70-600 Micron Layer Resolution	up to 120 mm/sec XY Print Speed	0.25, 0.4 or 0.8 mm Nozzle Diameter	2.85 mm Filament Diameter	Robust Aluminum Cartesian Frame	Cast Aluminum Blanchard Ground Flat 0.5" Thick Build Plate	NEMA 17 & NEMA 23 Stepper Motors

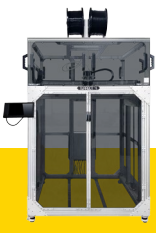

Touchscreen

Software

Electrical

							
LCD Touchscreen with Mainsail for Klipper interface	Optional network connecting for local monitoring & control	USB or Wifi File Transfer Method	Open Source Klipper Software Stack	G-code (.gcode) Upload File Type Includes Simplify3D Setting Profiles	110V 60Hz 20A or 220V 50Hz 10A	180-320°C Extruder Temperature	60-115°C Build Surface Temperature
